SP16.RISD.GD

Newly Christopher 1:10-6:10pm Formed Sleboda

This course focuses on advanced composition in Graphic Design and Typography using an array of materials, techniques and formats. Form remains an area of study in graphic design that does not need an application, only a surface. Emphasis will be placed on experimental form-making/imagemaking using generative and iterative approaches. Form need not follow function. Studio assignments are supported by lectures showing contemporary graphic form, from historical to contemporary work, that are effective and evocative. This elective aims to build a collection of work that can be shared with the larger graphic design community. New!. Chris is co-founder of Draw Down Books

Mark Laughlin

Shaping Lucinda Languagleitchcock

This introductory course is intended for nonmajors interested in learning the basic principles of typography including the study of letterforms, type classification, legibility, organization and hierarchy, as well as text applications, grid systems and page layout. Typography will be explored as both a means of communication and a vehicle for expression.

1:10-6:10pm

8am-1pm

Writing is a flexible material and molds to multiple

abstraction, sculpture, art and news; in 2D, 3D,

books, and screen; for public, private, galleries,

and commerce. While graphic designers have a

tasked with making the words we shape. What

the whole expression, from writing to form, and

vise versa? What if the boundaries between the

writing as making, and making as writing.

two were no longer rigid or distinct and we treated

deep kinship to the world of words, we are rarely

Data

Christian

Charts and graphs have an indisputable aura of objectivity and yet, much like statistics, they can use this power to either elucidate or mislead. What makes an information graphic 'trustworthy' and how do designers know that their work is telling the 'whole story'? In this course we will deal with the mechanics of collecting & processing data from the local environment and the larger world. Eschewing the expected line graphs and pie charts, students will explore different ways of communicating the data's meaning in a quantitatively rigorous and visually engaging way. Projects will involve the use of scripting languages, web scraping, databases, and other numerical tools to transform data into something that is understood rather than simply 'seen'. Ryan Waller

1:10-6:10pm

This course will investigate the unique challenges graphic designers face working across print and digital interfaces, and the opportunities for these spaces to have a dialogue with each other. Students will develop strategies for creating coherent visual and conceptual relationships that bridge this divide. How can responsiveness translate to print? What is the digital equivalent of a french-fold binding? Can a website be a timecapsule? Can a book be refreshed? Available in Web Adviser closer to Dec 1. Ryan is a partner at Other Means

EditorialDylan Design Greif for Screen

How can you draw on your foundations in graphic design to make reading experiences for the screen? What aspects of the craft translate, and what needs fresh exploration? This class covers basic HTML/CSS, wireframes, and flow diagrams, but it is not about 'designing and coding a website.' Students will learn to compose dynamic forms, tell engaging stories, and make meaning in digital environments. After experimenting with a series of form-led studies, the course turns to narrative design on screen. What are the components of a story? What are the needs and expectations of digital readers/viewers, and how can we design reading experiences that both serve and stir them? Where is the overlap between reader experience and user experience, between graphic design and product design? The semester's work not only engages the challenges that editorial web designers and digital storytellers in the industry face today, but asserts that designers should continue to re-think and re-

assert their practice, whatever the future brings.

communications.

projects).

Branding-or the development of an identity and an identity system-is a critical skill practiced by today's designers. Before we can design a brochure or a web site or an interface, there must be an identity to frame and influence the medium. Branding as a discipline not only requires the ability to design logos, but to think strategically about a company's ethos and mission. Having thought strategically about ethos or mission not only positions a designer to create an identity and identity system but to influence the way a company or organization conducts all of its

1:10-6:10pm

We stand firmly planted in a visual world, surrounded by a universe of things to look at. Images flicker from televisions, iPads, computer monitors and more-as large as towering billboards and as small as compact cell phones. Such images provide us with clues about our environment, feeding our mind with information that we find useful for survival or for orientation purposes. But these very same images clutter the horizon and prevent us from discerning what is truly important. How do we tell them apart? The primary goal is to equip students with the skills necessary to create meaningful and intelligent images. Course content is tailored for three levels of experience introductory, intermediate and advanced. Some of the class projects include documentary photography, film title design and music video. The works of Saul Bass, Bill Viola and Michel Gondry will be used as the "textbooks" for this course.

Publishing

comprehensive art and photographic books. We will examine the use of type in layouts, editing images, grids, scale, and pacing. Particular attention will be paid to certain elements of design production, including the visual, tactile, and aesthetic qualities of paper, printing, binding, color separation, and advanced techniques in reproduction, namely duotone and three-tone in black and white photography. In the first part of the semester students will design the layout and the corresponding dust jacket for a photographic book. The material will include a number of original black and white photographs from one of the very well known French photographers. In the second part of the semester, students will be given the choice between designing a book based on their own interests and completing a book design project using assigned material.

This course will cover all aspects of designing

1:10-6:10pm

This course will f expressing a strong point of view. It will advance your experience address critical relationships between type, image, and message at a large scale. The studio assignments will be supported with lectures about the history of the poster, international contemporary poster design, and future

possibilities and contexts for the poster forma

1:10-6:10pm

Three decades ago, the Macintosh dropped a scifi bomb on pop culture. It advertised a utopic vision of humancomputer creativity to mass audiences. By remixing militaryindustrialacademic fragments, a product company sold the dream of new humanism. This decade, the planet is bursting with smartphones; billions of people will carry globallynetworked pocket computers, each outfitted with sensors that datify the material world. We now have quantities, rates, and kinds of data unlike anything humankind has ever seen. Indiv<mark>id</mark>ual biological minds can't reason at network scale, so we're teaching fields of computers to do it nstead. If the data center is today's mainframe, is there a Macintosh hiding in the next decade? If your phone's camera is the next mouse, what will it click on? As machine learning reinvents humanism, what are 21st century creative tools? What do network literacy and 21st century citizenship look like? Is the programmer/user dichotomy destroyable? How much of this is just a design problem? We'll explore these topics with studio work and seminarstyle discussion. Studio work will include creation of mackuns videos webmedis interaction design, and beyond. Prototypes and design fictions are welcome. Programming experience is not explicitly required. Sincere eagerness to rigorously engage and reorient computer culture is must. Available in Web Adviser closer to Dec 1. Class site from 2015

1:10-6:10pm

This graduate-only course provides contact with top practitioners and theorists in four intensive workshops over the semester. The course objective is to provide graduates contact and interactions with national and international designers involved in a range of professional practice and public discourse of graphic design. Each workshop will consider what provokes, inspires, and informs your working methods, and the role that "publication" plays in the communication of your ideas. Each session begins with a Thursday evening lecture, a Friday

afternoon through Saturday workshop, and a

Sunday midday critique.

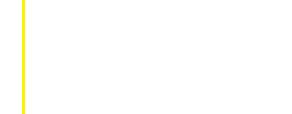

This workshop combines the tactical skills needed to structure web pages with a looser more playful compositional mindset. Students are introduced to the structural elements and properties of HTML and CSS through hands-on demos and take-home assignments. Tight technical HTML drawings in week one give way to looser, full-screen abstract compositions in week two. Weeks three and four make use of animation and interactivity using CSS3 and jQuery. Design Nurosi

Narrativ**e**lammett

Motion

In this studio, the first question raised is also the most complex: what qualifies a string of events as visual narrative discourse? This studio explores this question with assignments that increase in formal complexity throughout the semester: progressing from traditional type and image forms to more complex installations involving video arts, sound motions, film titles, web design, environmental and public art installation, logos, music clips and billboard animations. Students will learn to think kinetically, with ideas and projects that enhance communication and artistic voice. The studio also introduces principle theories of narrative discourse and sign systems. New!

MappingDouglass Informationtt

The visualizing of information into graphic form is one of the oldest forms of graphic design, and is one of the essential areas of professional design engagement. This course deals with the organization and analyzation of data, and the concepts and methods of visualizing information. Using information structure and visual systems of form, color, and typography, students will work projects which communicate complex information through the use of maps, graphs, charts, and diagrams. These projects will explore issues of mapping, hierarchy, location, time, comparison, motion, format, and the use of symbolic visual language.

1:10-6:10pm

This workshop is a hands-on experience where students will learn how 3D modeling is beneficial in conceiving, prototyping and presenting aimensionai work. Grapnic designers are increasingly using 3D modeling to plan and represent designs intended for exhibits, environmental graphics and signage. This workshop brings the necessary software and conceptual fluency to help designers make work in 3D. These designs may influence 2D deliverables as well as those intended for the built environment. Students will learn Rhinocerous for Mac. No prior experience required. Expected to be listed in Web Adviser by Dec 1
